www.opennetafrica.org

OpenNet Africa monitors and promotes internet freedoms, primarily in East and Southern Africa.

www.opennetafrica.org is a centralised platform for information on African internet freedoms and cyber security, including research materials, censorship incidents, laws on internet freedoms, online safety tools and advocacy materials.

Our Approach

Research and advocacy: Examine threats to access, privacy and security online, including policies and practices and how they can be more supportive of freedom of expression, human rights and access to information.

Dialogue: Spur multi-stakeholder conversations on protecting and promoting internet rights throughout Africa.

Knowledge and skills development: Train human rights defenders, journalists, bloggers, artists, and minority groups on internet freedoms, privacy and security online.

Access to technologies: Test, localize and promote use of tools that enable anonymizing users' identities, secure communications and the circumvention of surveillance and censorship.

Learning and exchange: Chart initiatives and promote a network of organisations that are advocating for an open internet and using ICT to promote wider freedoms.
